DETAILED ACTION

Response to Amendment

- 1. This is in response to applicant's amendment dated 02/13/2006 with the following results.
- 2. Claims 3-10 has been added. Therefore, claims 1-10 remain pending in this application.

Response to Arguments

3. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sims (US Patent No. 6,957,360) in view of Torazawa (US Patent No. 6,339,571).

As per claims 1-2, Sims discloses a method of processing data recorded on a recording medium, the recording medium including a plurality of zones forming a group, to manage defects at a group level, a spare area for replacing defects for the group, and

Art Unit: 2187

start position information for each zone in a predetermined area of the recording medium, the method comprising: reading the start position information from the predetermined area of the recording medium, with the predetermined area having the start position information for each zone, the start position information storing a start logical sector number for each of the zones; accessing the data recorded on the recording medium based upon the read start position information; and reproducing the accessed data [zone 1, zone 2, zone 3 (see Fig. 1); spare space is set a side at the end of the media (column 5, lines 53-55); defect management (column 6); starting addresses of the zones, logical addresses of the zones (column 7, 40-54)].

Sims discloses the claimed invention, but fails to specifically teach reading the start position information for each zones form the predetermined area of the recording medium.

Torazawa discloses a storage medium having a table of content for storing the density identification information and storing start address of each zone [column 12, lines 6-23].

Accordingly, it would have been obvious to one having ordinary skill in the art at the time of the current invention to include the TOC as being taught by Torazawa into Sims's recording medium in order to have a secure compatibility between recording/reproducing apparatuses for a recording medium if the specification of the medium is changed.

As for claims 3-10, Sims and Torazawa disclose determining the logical start position for the zones, and selecting the zone, wherein the start logical sector number for the zones are different; accessing the data recorded in the zones [inherent in the art, since in order to access a zone, the system select the zone and accesses the zone by the address].

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See attached PTO-892.

Application/Control Number: 10/681,131

8. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Nasser G. Moazzami whose telephone number is (571)

272-4195. The examiner can normally be reached on 7:00AM-5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

Page 5

supervisor, Donald Sparks can be reached on (571) 272-4201. The fax phone number

for the organization where this application or proceeding is assigned is 571-273-8300.

9. Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
